SEAWEED FARMING IN THE UNITED STATES

- A young industry emerging over the last decade
- Currently producing cold-water kelps and tank-cultured red algae
- Production primarily occurring in the Northeast and Northwest, as well as Hawai'i.
- For most operations small scale with limited, seasonal production (winter)
- Largely reliant on pre-existing working waterfront/fisheries infrastructure
- Current markets are primarily human consumption/food
- Projected to grow alongside significant research and development efforts

MAINE

FARMS & LANDINGS

40+

Active commercial farms, with over 100 sites permitted to grow seaweed or seaweed alongside shellfish.

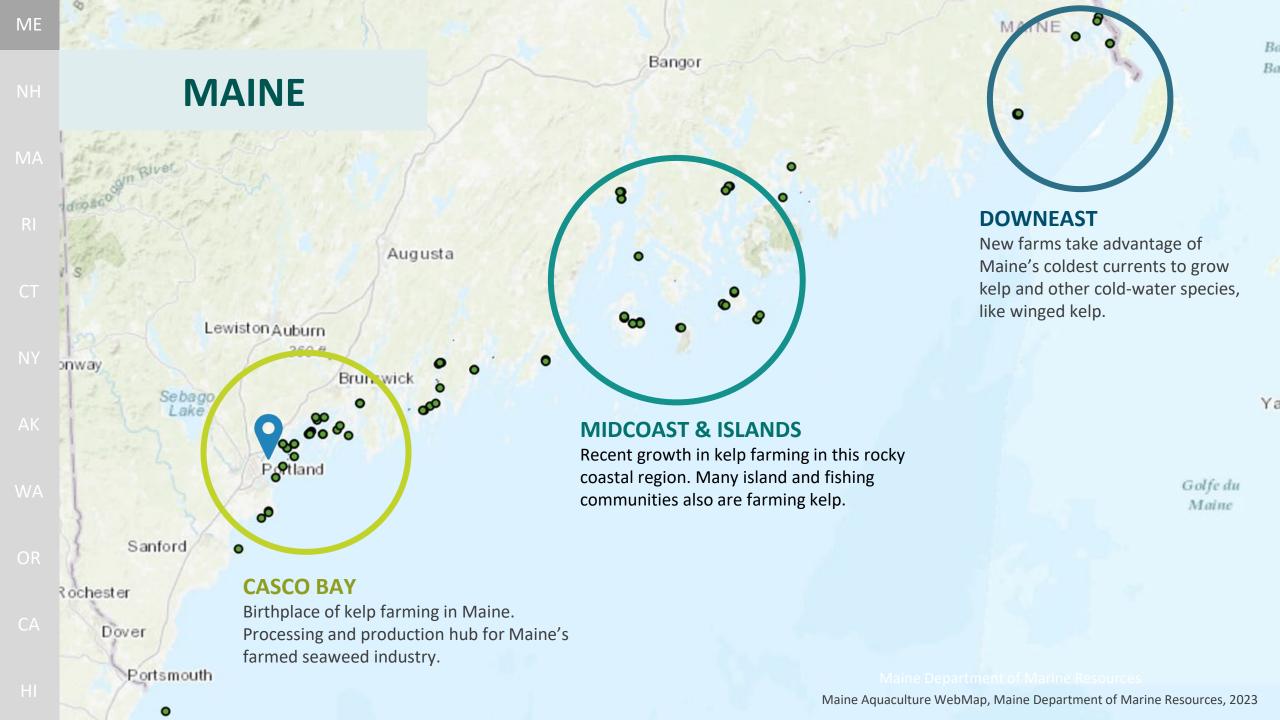

1,000,000+ lbs harvested in 2022

2023 landings expected to be over 1.2 million lbs. Landings reported through the state.

4 commercial seaweed nurseries with capacity to produce tens of thousands of seed spools.

Primary species under cultivation: **Sugar Kelp** (*Saccharina latissima*), **Skinny Kelp** (*Saccharina angustissima*), **Winged Kelp** (*Alaria esculenta*).

Maine also has a wild harvest seaweed industry, which landed approx. 15 million lbs in 2022 (mostly rockweed).

MAINE

PERMITTING & REGULATIONS

Lead Agency:

Maine Department of Marine Resources (DMR)

https://www.maine.gov/dmr/aquaculture/

Maine DMR issues licenses and leases for conducting shellfish, seaweed, and finfish aquaculture.

- Licenses may have a lower barrier to entry but are limited in size (400 sq. ft.) and need to be renewed annually. \$100-\$400/year.
- Leases are larger sites and are granted for up to 20 years. Farms can be up to 100 acres. For seaweed, leases will have application fees (\$100 or \$1500) and annual rent (\$100/year/acre)

Seaweed cultivated in Maine must be sourced from/native to Maine waters.

POST HARVEST

The primary market for Maine seaweed is value-added, consumer packaged goods and food products.

Maine has both first-stage processing (ex. drying, blanching, freezing, etc.) and second- stage processing (creation of consumer-ready products)

Increases in processor-farming contracting, processing capacity, product development, distribution, and marketing have allowed for stabilization and growth in Maine's kelp farming industry.

Examples of products produced in Maine include seaweed salads, kimchi, teas, smoothie cubes, snack bars, beverages, and spice blends, as well as dried whole leaf, flakes, powders.
