

National Seaweed Nursery Directory

The purpose of this directory is to identify available sources of seaweed (macroalgae) seed for cultivation in the United States. The directory includes facility contact information, available species and other factors related to seaweed seed sources. Updated annually, this directory will serve as a valuable resource to current and prospective farmers, regulatory authorities, and researchers across the country. Please note, this directory only reflects facilities that have chosen to opt-in, and therefore, is not a complete list of all sources. For further inquiries or changes to the directory, please contact Anoushka Concepcion at: anoushka.concepcion@uconn.edu. Please consult state-specific regulations or regulatory authorities before placing orders for seaweed seed stock to ensure sourcing complies with current regulation or guidance.
