SEAWEED FARMING IN THE UNITED STATES

- A young industry emerging over the last decade
- Currently producing cold-water kelps and tank-cultured red algae
- Production primarily occurring in the Northeast and Northwest, as well as Hawai'i.
- For most operations - small scale with limited, seasonal production (winter)
- Largely reliant on pre-existing working waterfront/fisheries infrastructure
- Current markets are primarily human consumption/food
- Projected to grow alongside significant research and development efforts

MAINE

FARMS & LANDINGS

40+

Active commercial farms, with over 100 sites permitted to grow seaweed or seaweed alongside shellfish.

1,000,000+ lbs harvested in 2023

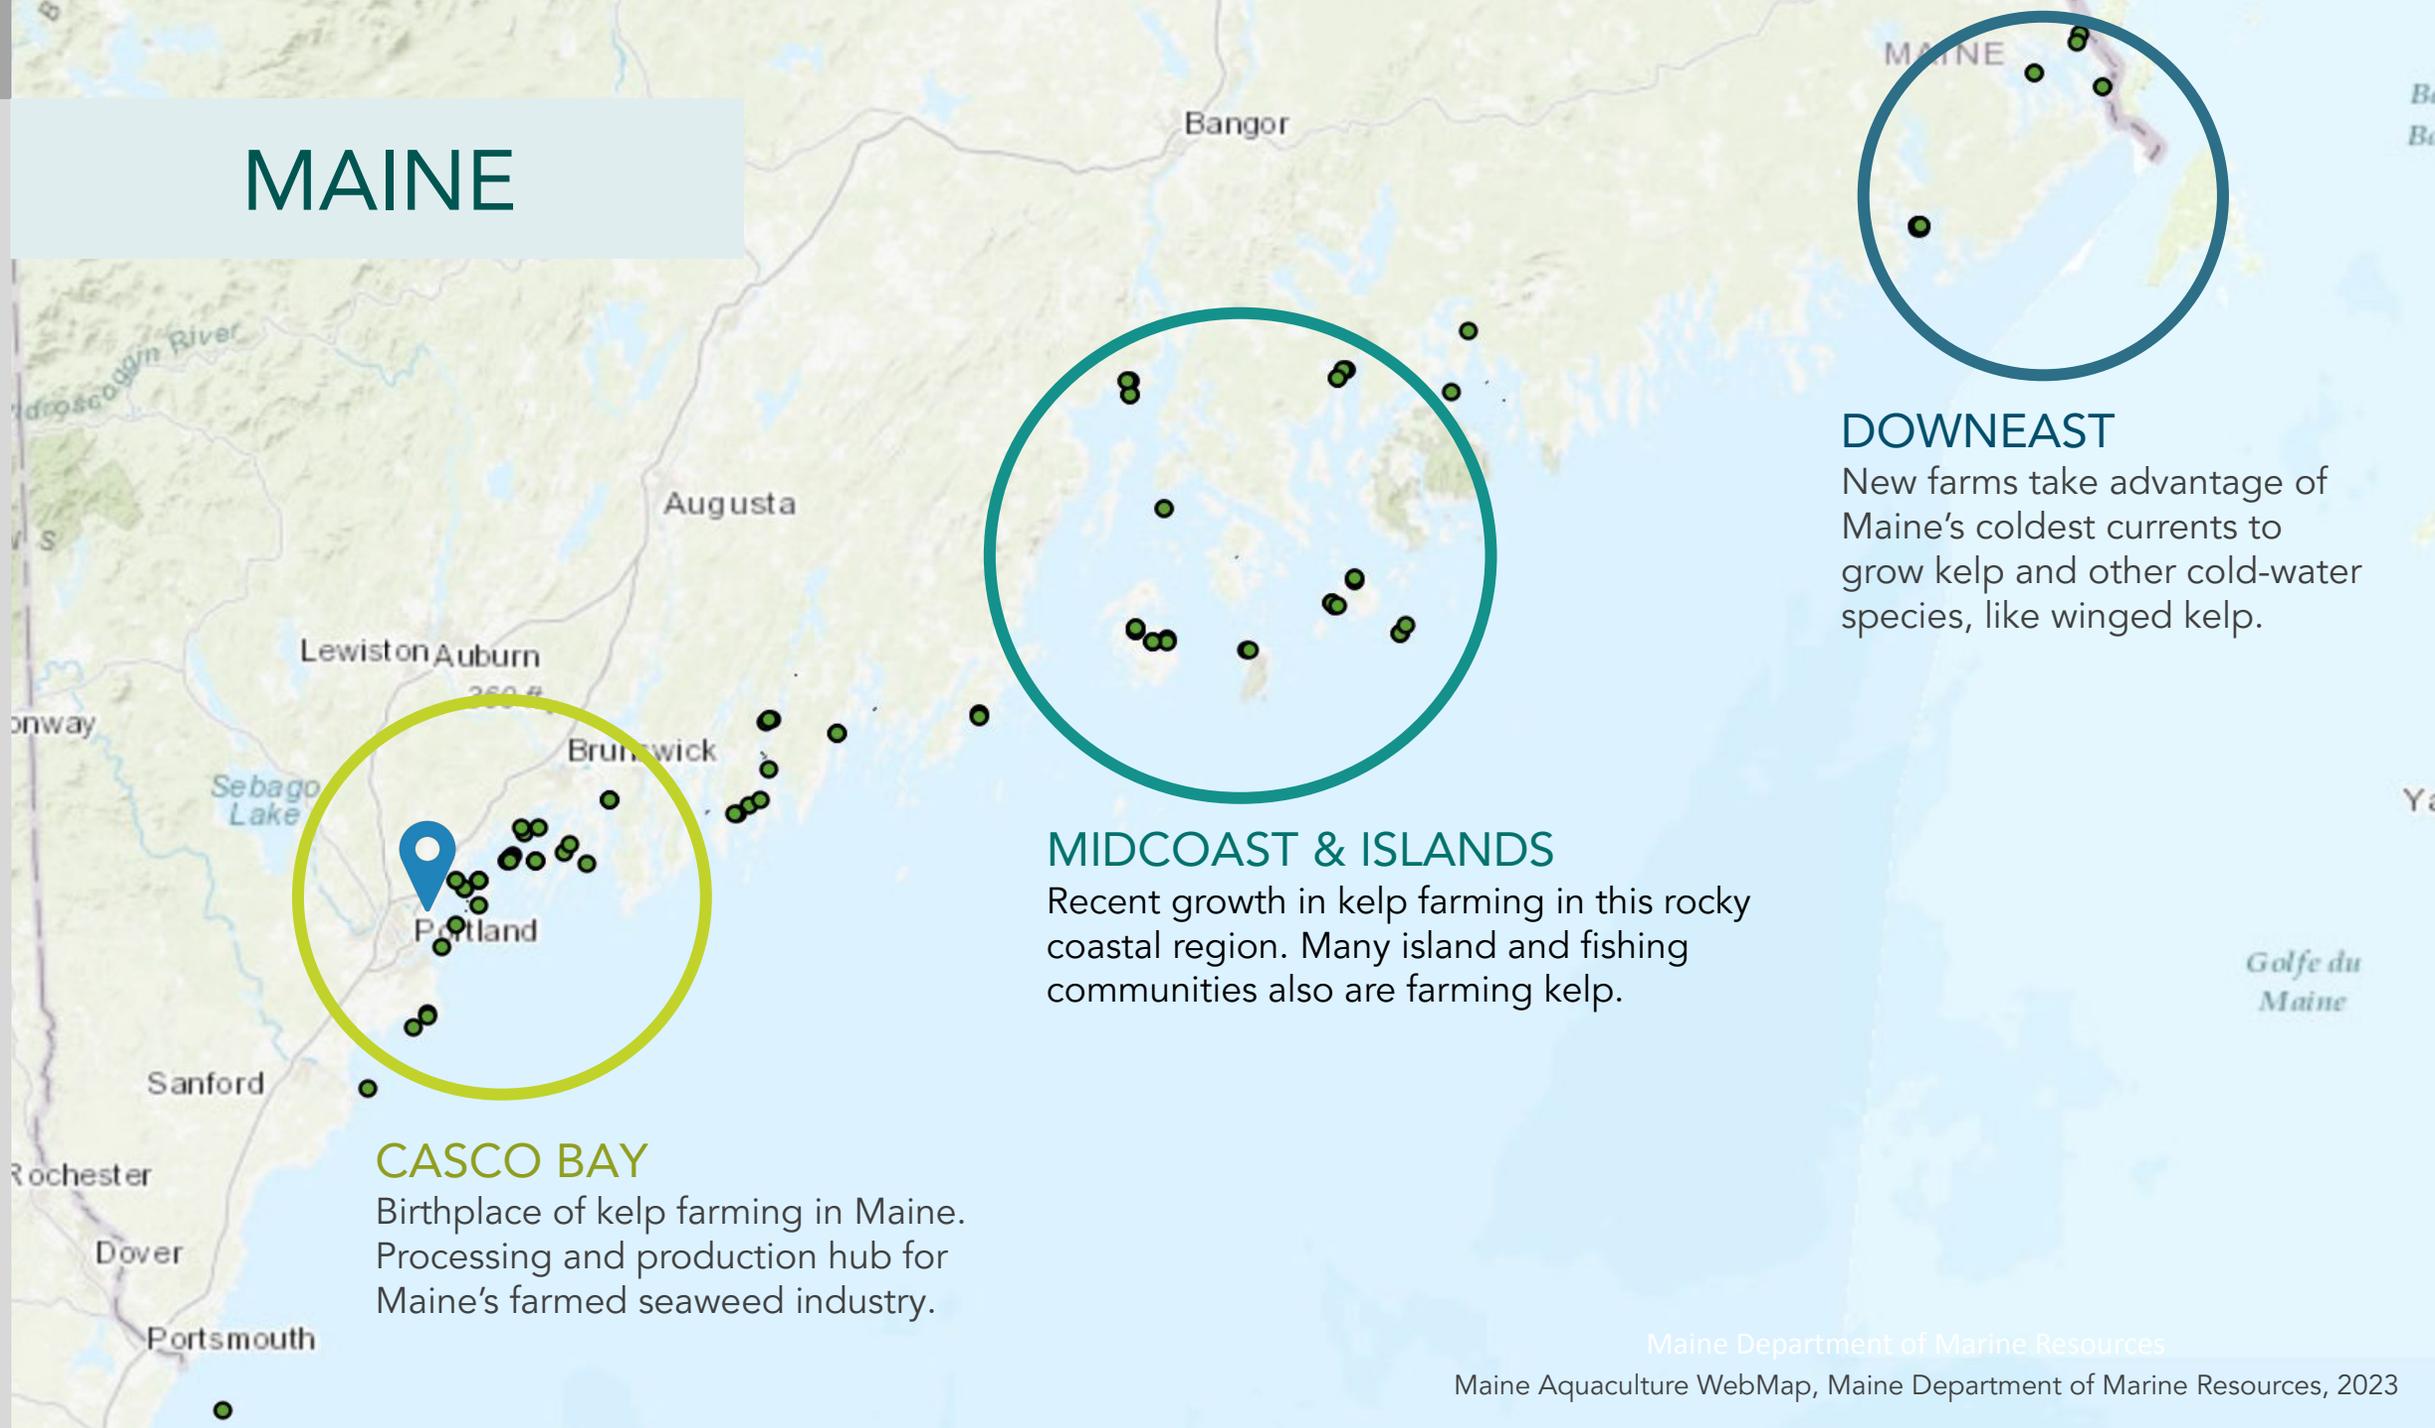

2023 landings expected to be over 1.2 million lbs. Landings reported through the state.

4 commercial seaweed nurseries with capacity to produce tens of thousands of seed spools.

Primary species under cultivation: Sugar Kelp (*Saccharina latissima*), Skinny Kelp (*Saccharina angustissima*), Winged Kelp (*Alaria esculenta*).

Maine also has a wild harvest seaweed industry, which landed approx. 15 million lbs in 2022 (mostly rockweed).

MAINE

CASCO BAY

Birthplace of kelp farming in Maine. Processing and production hub for Maine's farmed seaweed industry.

MIDCOAST & ISLANDS

Recent growth in kelp farming in this rocky coastal region. Many island and fishing communities also are farming kelp.

DOWNEAST

New farms take advantage of Maine's coldest currents to grow kelp and other cold-water species, like winged kelp.

MAINE

PERMITTING & REGULATIONS

Lead Agency:

Maine Department of Marine Resources (DMR)

<https://www.maine.gov/dmr/aquaculture/>

Maine DMR issues licenses and leases for conducting shellfish, seaweed, and finfish aquaculture.

- Licenses may have a lower barrier to entry but are limited in size (400 sq. ft.) and need to be renewed annually. \$100-\$400/year.
- Leases are larger sites and are granted for up to 20 years. Farms can be up to 100 acres. For seaweed, leases will have application fees (\$100 or \$1500) and annual rent (\$100/year/acre)

Seaweed cultivated in Maine must be sourced from/native to Maine waters.

ME

MAINE

POST HARVEST

The primary market for Maine seaweed is value-added, consumer packaged goods and food products.

Maine has both first-stage processing (ex. drying, blanching, freezing, etc.) and second- stage processing (creation of consumer-ready products)

Increases in processor-farming contracting, processing capacity, product development, distribution, and marketing have allowed for stabilization and growth in Maine’s kelp farming industry.

Examples of products produced in Maine include seaweed salads, kimchi, teas, smoothie cubes, snack bars, beverages, and spice blends, as well as dried whole leaf, flakes, powders.

FARMS & LANDINGS

5 Commercial Farms.

2 commercial farms (UNH) deployed and sold sugar kelp
3 commercial farms that did not deploy

2 Experimental Farms.

These farms are submerged longlines, with 3 lines per farm. One farm is located 9 miles offshore as part of a project funded by the Department of Energy

Primary species under cultivation: Sugar Kelp (*Saccharina latissima*)

Landing not reported and there is no wild harvest industry.

NEW HAMPSHIRE

PERMITTING & REGULATIONS

Lead Agency:

New Hampshire Fish and Game (F&G)

<https://www.wildlife.state.nh.us/>

New Hampshire F&G issues leases for shellfish, seaweed, and finfish aquaculture.

- The fee for conducting aquaculture in NH is \$500/submerged acre/year.
- Size of seaweed leases: No minimum size limit on leases for seaweed

ME

NH

NEW HAMPSHIRE

HI

POST HARVEST

The primary market for New Hampshire seaweed is **culinary uses and food products.**

Seaweed is sold to local restaurants and breweries as well as processors in Maine.

Seaweed is seasonally available in fresh/raw forms.

Examples of products produced include kelp beer and fresh kelp in restaurant dishes, as well as value-added products produced in Maine.

MASSACHUSETTS

FARMS & LANDINGS

5 Commercial Farms

Two of these farms are standalone kelp farms and three farms are within an existing shellfish farm. These are all commercial sites.

9,500 lbs

Harvested in 2023 for both human consumption and use in fertilizer products.

Official landings are not reported (farmer reported)

Primary species under cultivation:

Sugar Kelp (*Saccharina latissima*)

There is no commercial wild harvest industry, though there was historically.

MASSACHUSETTS

PERMITTING & REGULATIONS

Lead Agency:

Massachusetts Division of Marine Fisheries (DMF)

<https://www.mass.gov/service-details/aquaculture>

Massachusetts DMF works directly with the municipalities and issues a Class 4, Type 2 Commercial Aquaculture Permit for seaweed. ACOE is lead agency at federal level.

Largest site permitted currently is 27 acres.

MASSACHUSETTS

POST HARVEST

The primary market for Massachusetts seaweed is **Food products, and fertilizers**

Seaweed is sold: raw and fresh. Though has been dried and examined for use in food additives and skin care products.

In Massachusetts, sugar kelp must be sold directly to a wholesale seafood dealer to be a food product per Department of Public Health (DPH) food protection and DMF regulations.

RHODE ISLAND

FARMS & LANDINGS

10 Permitted Farms

10 farms are permitted in Rhode Island, but only 3 are growing kelp this year.

2 new permits currently under review.

4,500 lbs

Sugar kelp landings for 2023

Official landings are not reported (farmer reported)

Primary species under cultivation:

Sugar Kelp (*Saccharina latissima*)

There is no commercial wild harvest industry.

Seed source: self-propagated, private supplier, and university

RHODE ISLAND

PERMITTING & REGULATIONS

Lead Regulator:

Rhode Island Coastal Resources Management Council (CRMC)

<http://www.crmc.ri.gov/aquaculture.html>

Rhode Island CRMC issues shellfish and seaweed leases on state submerged land.

- Leases can be for 15 years, with yearly lease fees.

Due to growth in shellfish aquaculture, the state caps the acreage of aquaculture activities in coastal ponds at 5% of the total open water surface area.

Size of permitted farms: 2.0 to 9.6 acres

ME

NH

MA

RI

CT

NY

AK

WA

OR

CA

HI

RHODE ISLAND

POST HARVEST

Farmed seaweed in Rhode Island primarily goes to:
Processors

Seaweed is sold: freshly harvested / raw to processors, chefs, and consumers

In Rhode Island, kelp processors ability to purchase fresh product is the limiting factor for kelp farms.

FARMS & LANDINGS

15 Permitted Sites.

Of these sites, 10 farms deployed sugar kelp seed-string in 2022. In addition, Connecticut has 13 companies and 1 nursery.

2022 Landings: 3,800 lbs

No landings reported in 2023

Landings reported by the state

Species under cultivation: Sugar Kelp (*Saccharina latissima*) and Gracilaria (*Gracilaria tikvahiae*), in tank cultures only.

There is no commercial wild harvest industry.

CONNECTICUT

PERMITTING & REGULATIONS

Lead Agency:

Connecticut Department of Agriculture, Bureau of Aquaculture

<https://portal.ct.gov/DOAG/Aquaculture1/Aquaculture/Seaweed/Seaweed>

Kelp-only licenses are issued and are good for 5 years.

- Cultivation for seaweed is based on the Connecticut shellfish model and can only occur in approved or conditionally-approved waters.
- Size of permitted farms: 2-9 acres

ME

FARMS & LANDINGS

Tank Culture: SolSea LTD

Combined propagation/research facility at NOAA's Manchester Research Station.

Primary species under cultivation: *Chondracanthus* (Turkish towel), Dulse, and *Ulva*. Research incubators recently dedicated to continuous seasonal culture of Sugar Kelp and Bull Whip (aka Bull Kelp).

Annual production capacity: 28 metric tons (*not verified*) of *Chondracanthus* and Dulse (reduced during pandemic). Over 2000 lbs (multiple species) harvested for NOAA research.

WASHINGTON

PERMITTING & REGULATIONS

Joint Aquatic Resources Permit Application (JARPA) - Permit applications are funneled to the various agencies and stakeholders through the state JARPA process. Permits are ultimately granted by the US Army Corps of Engineers.

www.epermitting.wa.gov/site/jarpa/9983/jarpa.aspx

Washington Department of Natural Resources - WDNR leases are required for all farms on state-owned aquatic lands. Leases may be granted for up to 30 years. Note that ~50% of Washington tidelands belong to Treaty Tribes or private landowners; prospective growers are advised to consult with local county planning offices about tideland ownership.

OREGON

FARMS & LANDINGS

Currently, there are no ocean-based seaweed farms permitted in Oregon.

3 Land-Based Farms

Since 2016, there has been significant growth in land-based dulse farming in Oregon.

Access to a consistent supply of high-quality seawater is the main limiting factor for these land-based systems.

Primary species under cultivation: Dulse (*Palmaria mollis*)

The Land-based farms consist of anywhere between 5 and 10 10,000 liter tanks.

Official landings are not reported (farmer reported)

OREGON

PERMITTING & REGULATIONS

Lead Agency:

Oregon Department of State Lands (DSL)

<https://www.oregon.gov/dsl/WW/Pages/Waterways.aspx>

Oregon DSL issues special use leases or licenses.

- Leases can be from 1-30 years.
- Licenses grant non-exclusive use of state lands. A license can only be granted for less than 3 years.

CALIFORNIA

PERMITTING & REGULATIONS

Lead Agency:

California Department of Fish and Wildlife (DFW)

<http://wildlife.ca.gov/aquaculture>

California DFW coordinates permits/approvals for farms in state waters. They work with the California Fish and Game Commission who issues bottom leases in most areas. In some cases, the harbor/port districts may administer leases.

- Maximum lease term is 25 years (10 for marine finfish aquaculture).
- Lease process triggers an environmental review under CA law.

California requires an Aquaculture Registration through the DFW for all aquaculture businesses. California DFW also regulates the harvest of kelp and other aquatic plants.
